Fire

A Free After Effects Effect Preset

Getting Started

Copy the folder 'Fire by RocketStock' into the Presets folder in the Adobe After Effects applications folder. The next time you open After Effects you should see the effect presets in your Effects/Presets panel if you navigate to Animation Presets>Fire by RocketStock.

For more information reguarding installing .ffx files check out this page on Adobe's website: https://helpx.adobe.com/after-effects/using/effects-animation-presets-overview.html

Using the Preset

To apply the effects preset to your composition simply drag and drop it onto your footage, layer, text, or vector file in the After Effects timeline. You will immediately see a fire effect appear. You can adjust the way the fire effect looks using the 5 sliders on top. Here's what they do:

- ● **Flame Height:** Changes the distance the flames come off of the affected object.
- ● **Fractal Size:** Changes the size of the fire 'wisps'.
- ● **Fire Density:** Changes the thickness of the fire.
- ● **Flicker Speed:** Changes the speed of the fire.
- ● **Random Seed:** Changes the way the fire looks.

After you've adjusted the sliders set the layer's transfer mode to 'Add' or 'Screen'. You may want to create more than one layer to make the fire more realistic.

For more info on how to make the fire look even more realistic please visit the [corresponding blog post on Rocketstock](#).

Additional Help

With highly technical products such as After Effects templates, we receive a large volume of support requests that require detailed responses. This means that unlike our paid products, **we currently do not offer technical support with RocketStock freebies**.
